

ABSTRACT OF THE DISCLOSURE

A method for stabilizing a roof-resting vehicle includes the steps of leaning one or more buttress stands against a rear fender area of the vehicle, passing a chain under a rear end of the vehicle from one of the buttress stands to another, tightening the slack from the chain by pulling chain-grab end fittings towards the fenders at the vehicle undercarriage, using a ratchet strap, restraining the chain from sliding off the rear end of the vehicle by attaching a ratchet strap to the chain near a trunk lid of the vehicle, and passing the chain up to the vehicle undercarriage in front of a wheel assembly of the vehicle, attaching a ratchet strap at a base of the one or more buttress stands and tightening, and placing wedges in front of the opposite end of the vehicle, such that the vehicle is stabilized.
